RUVA PBH: Project Overview

ResearchUVA PBH Overview

- System Advantages
- Project History and Governance
- How will the System Be Used?
- Rollout Timeline

Overview: What is ResearchUVA PBH?

ResearchUVA PBH is an electronic research administration system that contains two modules:

The **Grants Module** to develop, route, and submit proposals, as well as manage awards and award modifications

The **Agreements module** to create, negotiate, and execute funded and non-funded agreements, including outgoing subawards

This new system will replace the legacy ResearchUVA system.

Overview: System Advantages

Collaboration

Cross-Grounds study teams can be created that can work on the proposal together in the system.

Relationship Management

The system creates relationships between proposals, agreements and awards. Tags can be used to track programs tied to institutional investments and thematic areas.

System-to-System

The system submits proposals directly to Grants.gov and ensures it will pass validations.

Proposal Tools

The system provides tools and data to help study teams create proposals, including multiple iterations of budgets.

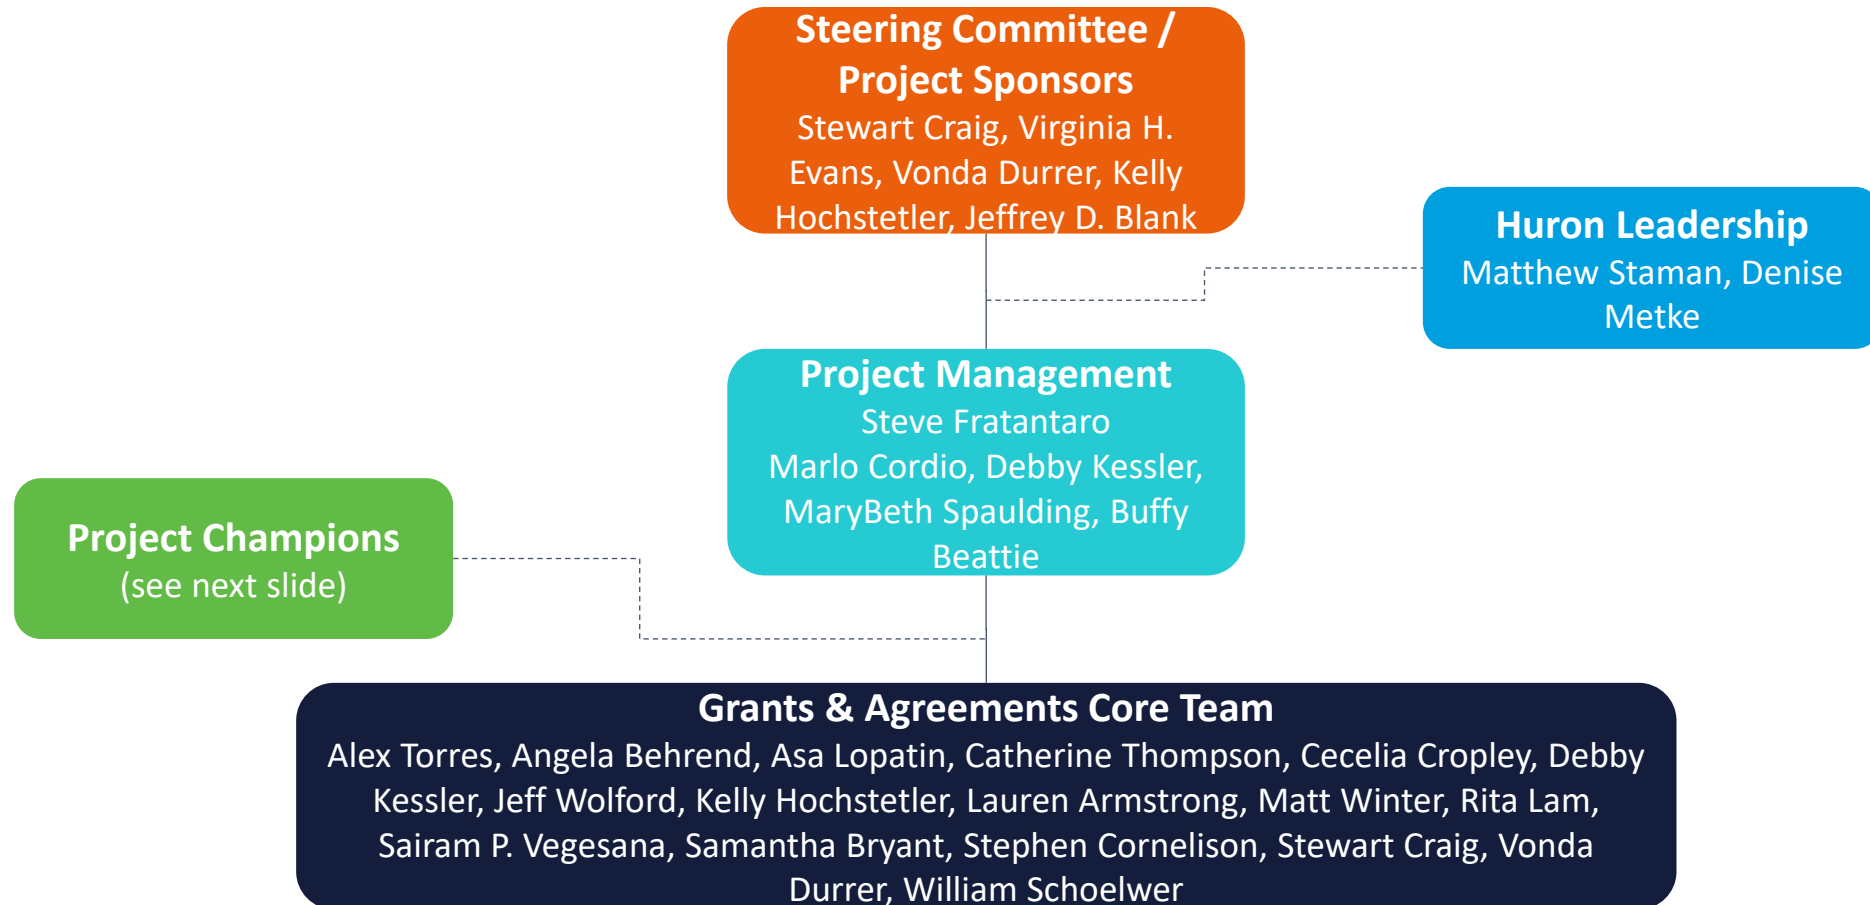

Data and Reporting

Substantial programmatic and fiscal data will be pulled from the system and placed in a data warehouse for unprecedented reporting opportunities.

Overview: History & Governance

The ResearchUVA PBH project is sponsored by the Office of the Vice President for Research, and UVA stakeholders have been engaged since the project's inception.

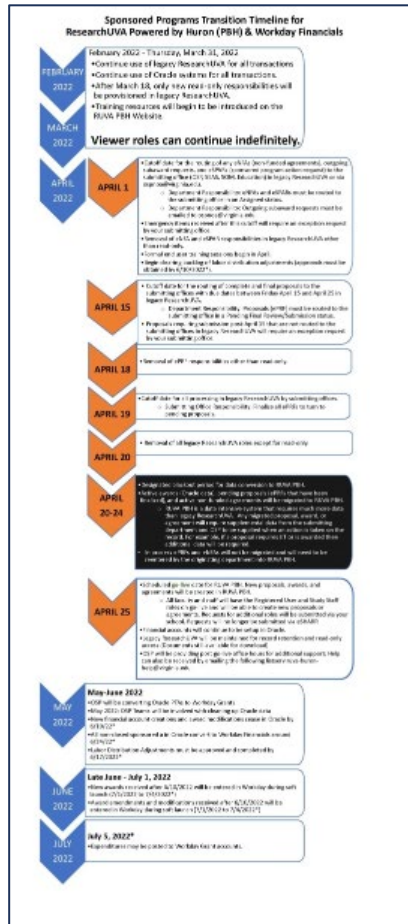

Overview: Project Champions

The project has been guided by a team of Champions representing UVA units:
