Office of Sponsored Programs

Dear Colleagues,

Today's newsletter highlights the ResearchUVA Powered by Huron (ResearchUVA PBH) Award functionality, which will be used to manage awards, award modification requests, and award modifications after the system is launched in late April 2022. The last communication sent Friday, February 11, provided highlights of the Funding Proposal functionality.

5 things to know about Awards:

1. **All years of funding** are recorded when establishing a new award, including the current authorized amount and anticipated future years' funding.
2. **Relationship management** functionality is included with awards, providing the ability both to link awards with related funding proposals and agreements, and to easily view the linked relationships from the award record.
3. **Awards are created from Funding Proposal records.** Data from the funding proposal, such as the budget and key personnel information, populate the draft award. The budget and other award details are then updated (as necessary) in the system using delivered functionality.
4. **Flexible permissions** allow personnel other than the PI to easily be granted edit or read-only access to an award.
5. **Tags** can be used to identify and track awards tied to institutional strategic priorities, investments, and other areas of interest or to quickly address evolving reporting or compliance needs – "COVID-19 research" is one example of a tag that might be created to track and report on an emerging theme.

Our next newsletter will provide highlights on the Agreements module.

Please send any questions or comments you may have to ruva-huron-help@virginia.edu.

Sincerely,

Stewart Craig, Executive Director, Office of Sponsored Programs, and the ResearchUVA PBH Team
